

# QTS Data Centers

## Powered by People

### What is a Data Center?

A data center is a building that stores large amounts of digital data. You likely access a data center whenever you use your mobile phone, access your online banking or medical records, or engage in any digital activity.

Data centers play a critical role for businesses and communities. They enable reliable internet access and ensure secure data storage.

### About QTS

QTS is the digital infrastructure leader – Powered by People, driven by purpose and fueled by a spirit of innovation. We have a 20-year track record of designing, building and operating world-class data centers, delivering the critical infrastructure for the world's largest and fastest growing companies. We have more than 75 data centers in operation or under development across the United States and Europe.

### Our Community Commitment

Our role as the digital infrastructure leader goes far beyond building and operating the world's most advanced data centers. It means staying true to our core values and uplifting the communities in which we live, work and operate.

We work hard to listen to the unique needs of each community to determine the best way in which we can contribute. We are committed to providing job opportunities, fostering economic growth, working with local suppliers, and operating as trusted neighbors and responsible stewards of the environment and community resources.

Through our diverse giving programs – including individual employee volunteerism and matched donations, corporate-sponsored events, grants to charitable organizations and success-based giving – QTS enriches our communities and helps improve lives.

#### QTS Community Impact in 2024

**\$7.5 million**  
in charitable donations

**300+**  
charitable organizations supported

**15,300**  
employee volunteer hours

*What really drew me in was not only my mentors and the leadership team at QTS, but how the company emphasizes personal growth, community involvement, and fosters teamwork. My mentors and leaders not only offered career advice but also made my transition to the civilian workforce stress free by guiding me on how to translate my skillset.*
